SUMMARY

Computer Engineering student and full stack developer skilled in the MERN stack (MongoDB, Express.js, React JS, Node.js) and Python, with hands-on experience building AI-powered applications and agentic systems. Experience supporting live software systems, diagnosing and resolving reported issues, and leading a cross-functional team at an early-stage startup. Keen to contribute to code quality, reliability and test coverage.

EDUCATION

Greater Noida Institute of Technology, Gautam Buddha Nagar — Sept 2023 – Present
B.Tech — Computer Engineering — *CGPA: 6.79*

- Cleared internal rounds of Smart India Hackathon (SIH).
- Semi-Finalist at EY Techathon 6.0.
- Won the inter-college Mathematics Competition.

International Hindu School — Senior Secondary (XII) — 2022 | 72%
International Hindu School — Secondary (X) — *2020 | 80%*

EXPERIENCE

Fluxypy — Team Lead — Mar 2026 – Jun 2026
Startup — Product & Team Leadership

- Lead a cross-functional team at an early-stage startup, overseeing day-to-day operations, sprint planning, and product direction.
- Driving the end-to-end development of EduFlux ERP — a comprehensive education management platform with strong market potential.
- Managed product roadmaps, coordinated between engineering and stakeholders, and ensured timely delivery of features.

Neptune India Limited — Software Support Engineer — Jul 2026 – Oct 2026
Parking Systems Software

- Contributed to the development and maintenance of Python-based parking software, including the Parking Information System (PIS), Parking Guidance System (PGS), and Annie Management System (AMS).
- Provided day-to-day software support to site engineers, resolving issues and keeping deployed parking systems running smoothly.

PROJECTS

Smart Advisory System for Marginal Farmers — Sept – Nov 2025
Smart India Hackathon

- Built a conversational chatbot that guides farmers on crop selection using soil health, weather, and market data.
- Integrated machine learning models to generate actionable recommendations on fertilizer use and crop viability.
- Developed the user-facing interface and the backend services, backed by a relational database.

Autonomous Predictive Maintenance and Scheduling of Vehicles — Nov 2025 – Mar 2026
EY Techathon 6.0 — Semi-Finalist

- Built an agentic AI system where a master orchestrator coordinates specialised worker agents.
- Used telematics data, sensor readings, and RCA/CAPA logs to drive predictive maintenance decisions.
- Created dedicated agents for diagnostics, customer interaction, service scheduling, and feedback collection.
- Designed a scheduling engine that handles failure severity, availability checks, and automated bookings.
- Added behaviour-based monitoring to flag unusual agent behaviour and block unauthorised actions.

TECHNICAL SKILLS

Languages: JavaScript, Python3
Frontend: React JS, HTML, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, Flask, FastAPI
Databases: PostgreSQL, MongoDB
AI & Automation: LangChain, n8n
Tools & Platforms: Git, GitHub
Competitive Coding: CodeChef — 200+ problems solved | LeetCode — 150+ problems solved, 1500 contest rating
Soft Skills: Communication, Leadership, Team Collaboration, Problem Solving
